Q.1. K_9 = complete graph

$$\text{edges} = \frac{n(n-1)}{2} = \frac{72}{2} = \underline{\underline{36}}$$

$$K_{5,8} = \underline{\underline{5 \times 8 = 40}}$$

Q.2. Draw a graph which is regular of degree 3.

($n > 5$)

Q.3. Which graphs are isomorphic?

→ checking G_1 and G_2

| G_1 | | | G_2 | | |
|-------|-----|-------------|-------|-----|------------|
| ver | deg | G adj deg | ver | deg | adj |
| a | 2 | 3, 3 | a | 2 | 4, 3 |
| b | 3 | 2, 4, 3 | b | 4 | 2, 3, 3, 2 |
| c | 3 | 3, 4, 2 | c | 2 | 4, 3 |
| d | 2 | 3, 3 | d | 3 | 2, 3, 2 |
| e | 3 | 2, 4, 3 | e | 3 | 4, 3, 3 |
| f | 3 | 2, 4, 3 | f | 3 | 4, 3, 3 |
| g | 4 | 3, 3, 3, 4 | g | 3 | 3, 3, 3 |

These vertices don't match

So G_1 not isomorphic to G_2

≠ same

checking G_1 & G_3

| G_1 | | | G_3 | | |
|-------|-----|---------|-------|-----|---------|
| ver | deg | adj | ver | deg | adj |
| a | 2 | 3,3 | a | 3 | 3,3,3 |
| b | 3 | 2,4,3 | b | 3 | 3,4,3 |
| c | 3 | 3,4,2 | c | 3 | 4,3,3 |
| d | 2 | 3,3 | d | 4 | 3,3,3,2 |
| e | 3 | 3,4,3 | e | 2 | 3,4 |
| f | 3 | 2,4,3 | f | 3 | 3,2,2 |
| g | 4 | 3,3,3,3 | g | 2 | 3,4 |

→ does not match

So not matching
not Isomorphic

checking G_2 & G_3

| G_2 | | | G_3 | | |
|-------|-----|---------|-------|-----|---------|
| ver | deg | adj | ver | deg | adj |
| a | 2 | 4,3 | a | 3 | 3,3,3 |
| b | 4 | 2,3,3,2 | b | 3 | 3,4,3 |
| c | 2 | 4,3 | c | 3 | 4,3,3 |
| d | 3 | 2,3,2 | d | 4 | 3,3,3,2 |
| e | 3 | 4,3,3 | e | 2 | 3,4 |
| f | 3 | 4,3,3 | f | 3 | 3,4,2 |
| g | 3 | 3,3,3 | g | 2 | 3,4 |

Match

So G_2 and G_3 are Isomorphic

Q. 4.

$K_{3,2}$

Complement would be

as degree of ~~b=2~~, it is
not a regular graph

Q. 6. (i)

(ii) $K(4)=3$; $\lambda(4)=4$

(iii) Both Hamiltonian & Eulerian

(iv) Planar graph with 12 edges & 7 vertices

(v)
