Lab Assignment 7

FIFO Page Replacement Algorithm

Problem Statement : Write a program to simulate the FIFO (First In First Out) page replacement algorithm.

Page Replacement Algorithms

FIFO Page Replacement Algorithm

FIFO Page Replacement Algorithm

FIFO is a method of processing and retrieving data.

In a **FIFO** system, the first items entered are the first ones to be removed.

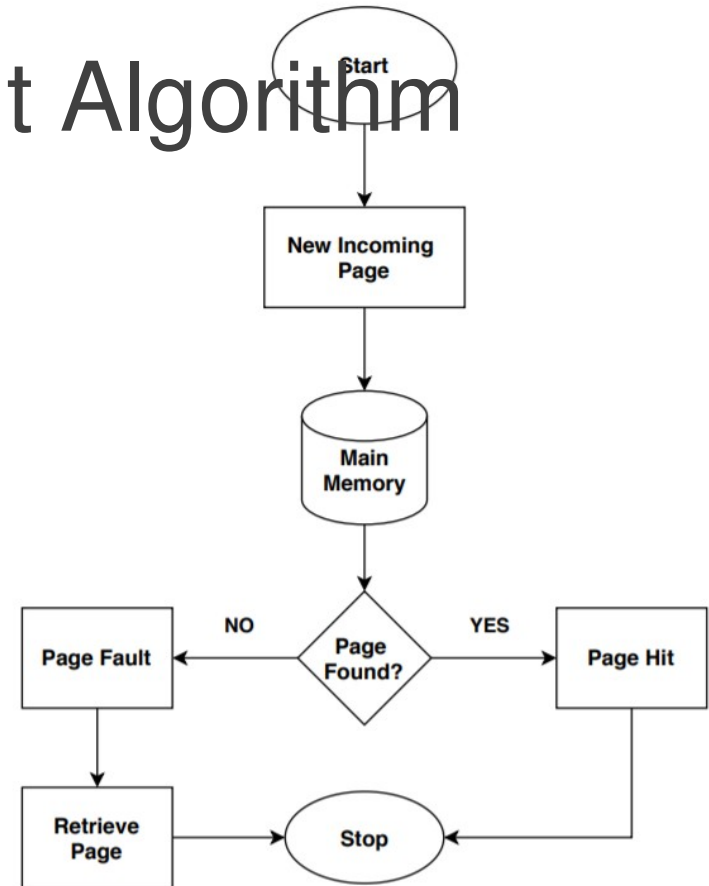

In this algorithm, the operating system keeps track of all pages in the memory in a queue, the oldest page is in the front of the queue. When a page needs to be replaced page in the front of the queue is selected for removal.

FIFO Page Replacement Algorithm

Page replacement algorithms like FIFO are used when there is a new page request, and there is not enough space in the main memory to allocate the new page.

Hence, a page replacement algorithm decides which page it should replace so that it can allocate the memory for the new page.

॥ विश्वशान्तिर्ध्रुवं ध्रुवा ॥

Example- Consider page reference string 1, 3, 0, 3, 5, 6 with 3 page frames. Find number of page faults.

Page
reference

1, 3, 0, 3, 5, 6, 3

1	3	0	3	5	6	3
		0	0	0	0	3
	3	3	3	3	6	6
1	1	1	1	5	5	5
Miss	Miss	Miss	Hit	Miss	Miss	Miss

Total Page Fault = 6

Initially all slots are empty, so when 1, 3, 0 came they are allocated to the empty slots —
> **3 Page Faults.**

when 3 comes, it is already in memory so —
> **0 Page Faults.**

Then 5 comes, it is not available in memory so it replaces the oldest page slot i.e 1. —>**1 Page Fault.**

6 comes, it is also not available in memory so it replaces the oldest page slot i.e 3 —>**1 Page Fault.**

Finally when 3 come it is not available so it replaces 0 **1 page fault**

Pseudo Code

1. Travel the pages/string

1. If (reference_set consist less pages, then capacity) then
 1. Insert in reference_set (current_page);
 2. Increment page fault;
 3. Push the current_page in queue;
2. Else
 1. Check if current page is there in reference_set or not then
 1. Dequeue the first page; (pop out from queue and erase the value)
 2. Replace fist page in queue with current page;
 3. Increment page fault;

2. Return page_fault;
